State Income and Balance Sheet Statistics, 1982

ECONOMIC INDICATORS OF THE FARM SECTOR: STATE INCOME AND BALANCE SHEET STATISTICS, 1982. National Economics Division, Economic Research Service, U.S. Department of Agriculture. ECIFS 2-4.

ABSTRACT

The five leading States for farm cash receipts in 1982 were California, at \$14.3 billion; Iowa, at \$10.3 billion; Texas, at \$9.7 billion; Illinois, at \$7.4 billion; and Nebraska, at \$7.1 billion. Texas was the leading State in farm cash receipts for cattle and calves at \$4.1 billion, Wisconsin for dairy products at \$3 billion, Illinois for corn and soybeans at \$2.7 and \$1.9 billion, respectively, Kansas for wheat at \$1.3 billion, Iowa for hogs at \$2.9 billion, and California for eggs at \$363 million. Accounts are presented for farm income and the farm balance sheet by State, including and excluding household assets, debts, income, and expenses.

Keywords: Farm assets, farm debt, net farm income, returns to operators.

SALES INFORMATION

The Economic Indicators of the Farm Sector series is available on a subscription basis. Five separate reports are published annually. Subscription rates are \$15 domestic; \$18.75 foreign. Send check or money order payable to "Superintendent of Documents" to:

#### PREFACE

This report is one of five in the Economic Indicators of the Farm Sector series, which includes longstanding data series such as farm income and the balance sheet of the farm sector. The series is in the process of being updated to reflect the changing nature of today's farm sector. This issue provides updated and revised data by State.

State Income and Balance Sheet Statistics, 1982, corresponds to the national data published in <u>Income and Balance Sheet</u>
Statistics, 1982, disaggregated to the State level. Data are reported at the State level for farm income and balance sheet accounts including and excluding farm households.

One major feature is the separation of the operator's household and dwelling from farm production transactions, assets, and debt. This format is more appropriate for expanding the aggregate accounts into subsector groups.

All of the income estimates in this report are on a calendar year basis. Many are used as basic data for the State and regional personal income estimates and the national income and product accounts of the U.S. Department of Commerce.

The data, while mainly based on information from the U.S. Department of Agriculture's Statistical Reporting Service and from the Census of Agriculture, also include information from other Government agencies and, in some cases, from private sources. Revisions, made for the most recent years when additional information becomes available, were made back to 1970.

This publication was prepared by the staff of the Farm Sector Analysis Section, Economic Indicators and Statistics Branch, National Economics Division, Economic Research Service. The contributors acknowledge the contributions of Allen Smith, who retired September 30, 1983.

#### HIGHLIGHTS

The five leading States in farm cash receipts in 1982 were California, at \$14.3 billion; Iowa, at \$10.3 billion; Texas, at \$9.7 billion; Illinois, at \$7.4 billion; and Nebraska, at \$7.1 billion. Iowa, Texas, California, Nebraska, and Wisconsin were the leaders in livestock receipts. California, Illinois, Iowa, Texas, and Florida led in crop receipts.

The leading States in cash receipts for individual commodities were Texas for cattle and calves; Wisconsin for dairy products; Illinois for corn and soybeans; Iowa for hogs; Kansas for wheat; Texas for cotton; Arkansas for broilers; and California for eggs and greenhouse and nursery products.

The five leading States in gross farm income before inventory adjustment for 1982 were California, at \$15.4 billion; Iowa, at \$11.5 billion; Texas, at \$11.4 billion; Illinois, at \$8.3 billion; and Nebraska, at \$7.7 billion.

The five leading States in net farm income after inventory adjustment were California, at \$3 billion; Florida, at \$1.4 billion; Iowa, at \$1.2 billion; Wisconsin, at \$1.1 billion; and Minnesota, at \$1.1 billion.

The five leading States in production expenses were California, at \$12 billion; Texas, at \$10.2 billion; Iowa, at \$10.1 billion; Illinois, at \$7.6 billion; and Nebraska, at \$6.7 billion.

Under the balance sheet accounts, the five leading States in assets including farm households as of January 1, 1983, were Texas at \$101.1 billion; California, at \$77.4 billion; Iowa, at \$73.6 billion; Illinois, at \$65.5 billion; and Minnesota, at \$48 billion. The rankings, excluding farm households, were Texas, California, Iowa, Illinois, and Minnesota.

The five States carrying the highest total debt were Iowa, at \$17.5 billion; California, at \$16.8 billion; Texas, at \$13.7 billion; Minnesota, at \$12 billion; and Illinois, at \$11.8 billion. The rankings stayed the same when households were excluded.

The rankings for the five States showing the largest equity placed Texas first, at \$87.2 billion, followed by California, at \$60.6 billion; Iowa, at \$56.1 billion; Illinois, at \$53.7 billion; and Minnesota, at \$36 billion. When farm households were excluded, the rankings remained the same.

The highest debt-to-asset ratios were South Dakota, at 28.3 percent; Nebraska, at 28 percent; Georgia, at 27.8 percent; Minnesota, at 25 percent; and New York, at 25 percent. When household assets were excluded, the rankings changed slightly to Georgia, South Dakota, Nebraska, Maine, and New York.

## **Economic Indicators** of the Farm Sector

State Income and Balance Sheet Statistics, 1982

#### BACKGROUND

The U.S. Department of Agriculture (USDA) has published a comprehensive set of income estimates relating to agriculture since the midtwenties. The series have been revised and expanded through time, incorporating individual State estimates in 1949 and sales class distributions in 1960. In 1980 new accounts were added which now permit the earnings and financial dimensions of the farm business to be distinguished from farm family income and finances. These accounts, along with the former accounts, are included in this publication.

Revisions to farm income were made in 1981 to incorporate the data made available from the 1978 Census of Agriculture. These revisions were carried back to 1970. For this publication, revisions have been made again back to 1970 to those accounts affected by the 1979 Farm Finance survey data. These survey data were not available until July 1982 and were not included in Economic Indicators of the Farm Sector: State Income and Balance Sheet Statistics, 1981 (ECIFS 1-2), published October 1982.

These accounts were developed to separate the aggregate accounts so that the earnings of the farm business unit may be distinguished from farm family income and to permit a better analysis of the wealth and income status of the production units and the operators of those units by type of farm, value of sales class, and type of ownership.

The production sector accounts are based on the concept of separating the measurement of the economic viability of the production units (establishments) of the farm sector (a part of the business sector of the national economy) from the well-being of the farm operator families (a part of the household sector of the national economy). Information on the nonfarm assets and debts of farm operators is limited and is not reported in this publication.

In this report, the State income accounts (excluding farm households) include data for calendar years 1979 through 1982. The balance sheet accounts (excluding farm households) include data for January 1, 1979, through January 1, 1983.

This publication consists of two sections, the income section and the balance sheet section. Titles of tables in the income section indicate whether farm household transactions are included or excluded. The same differentiation is made in titles of tables on the balance sheet accounts.

The terms "farm" and "establishment" represent the places where the production process occurred. The establishment concept used for 1977 and following years in this report is the official census farm definition adopted in 1974 which includes places with annual sales, or potential sales, of \$1,000 or more.

Households include all families or individuals receiving income from the agricultural production sector. The household category emphasized in this report is farm operators, although some of the tables include landlord and employee categories. The operator category includes owners and tenants, as well as managers associated with corporate or institutional establishments.

STATE INCOME ACCOUNTS Table 1 shows rankings by commodity; table 2 shows rankings by State. Farm production transactions follow in table 3, followed by cash income by State in table 4. Other tables give cash receipts by commodities for the United States and each State, gross and net farm income by State, farm production expenses by State, and Government payments by program by State.

Rankings by Commodity and State

In 1982 California led in cash receipts from all commodities with a total of \$14.3 billion. California was the leading State in sales of all crops and ranked third for all livestock. California's main commodities were dairy products, at \$1.9 billion; cattle and calves, at \$1.5 billion; grapes, at \$1.2 billion; and cotton, at \$1.1 billion. California was the top producer of eggs, greenhouse and nursery products, hay, grapes, tomatoes, and sugar beets.

Iowa ranked second behind California by earning \$10.3 billion in cash receipts. Iowa had the most sales of livestock and ranked third in crop sales. Iowa ranked first in hog sales and second in corn and soybeans. Iowa's main livestock and crops were hogs, cattle, corn, soybeans, and dairy. Texas was also heavy in livestock sales, ranking third in all commodities, second in all livestock, and first in cattle and calves. Texas's main commodities were cattle, cotton, wheat, sorghum, and dairy. Illinois ranked fourth in all commodities and Nebraska ranked fifth.

The rankings have not changed much since 1979 when California, Texas, Iowa, Illinois, and Nebraska were the top five States in cash receipts for all commodities, and Texas led in livestock receipts and California in crop receipts. Going back 10 years to 1973, the top five States were Iowa, California, Texas, Illinois, and Kansas; Nebraska finished seventh. The proportion of total cash receipts remained fairly stable with the top five States having 35 percent of the total cash receipts in 1973, 34 percent in 1979, and 34 percent in 1983.

#### Farm Production Transactions

In the transactions summary, the residual is returns to operators, and total receipts are designated gross farm receipts. Gross receipts differ from gross farm income in the farm income accounts because the rental value of the farm operator dwelling is removed and Commodity Credit Corporation (CCC) loans are treated as loans, not sales at the time the loans are made. The Government payments are the same for both accounts.

Production expenses under the production transactions accounts are divided into factor and nonfactor payments. Under nonfactor payments, intermediate production expenses of nonfarm origin include purchased inputs, such as fuel, repairs, fertilizer, and pesticides. Intermediate production expenses of farm origin are those for seed, feed, and livestock purchased. Other nonfactor payments include capital consumption and business taxes.

Capital consumption includes depreciation and accidental damage. Depreciation is measured on a replacement value basis rather than purchase price in order to reflect decreases in current market value of the capital stock. Depreciation is lower in the production transactions accounts than in the net farm income accounts because the operators' dwellings are not included.

Factor payments are the income available to provide returns to the factors—land, labor, and capital. These returns are interest, wages to hired labor, net rent to all landlords, and returns to operators. Returns to operators are the portion of income left to the operator for returns supplied from labor, management, and capital.

In 1982 California led the Nation in returns to operators at \$2.7 billion, followed by Florida, at \$1.3 billion; Wisconsin, at \$893 million; Minnesota, at \$754 million; and North Carolina, at \$747 million.

The low 1982 U.S. total returns to operators of \$15.1 billion compared with \$23.3 billion for 1981; this was triggered by negative returns to operators in many States. West Virginia, Wyoming, Indiana, Virginia, and Montana had the largest losses, and a total of 12 States showed declines. In 1981 only four States had losses; California led in total returns to opera-

tors, at \$3.9 billion, followed by Iowa, at \$1.7 billion; Illinois, at \$1.4 billion; Texas, at \$1.4 billion; and Florida, at \$1.3 billion.

Using returns to operators as a measure, returns to farm production resources were much lower in 1982 than in 1981, especially in those States dependent on grains and livestock, such as Illinois, Iowa, and Texas. California and Florida both enjoyed a better relative income position measured by returns to operators in 1982 than the Corn Belt and Southern Plains States.

Factor payments for the United States increased from \$33.9 billion in 1981 to \$36.8 billion in 1982; interest charges increased almost \$2 billion. Nonfactor payments dropped slightly from \$97.9 billion to \$97.8 billion.

Factor payments increased by \$492 million in California and \$126 million in Texas in 1982 compared with 1981. Factor payments in Iowa, in contrast, only increased \$13 million. None of the States decreased in factor payments. While California and Texas increased in nonfactor payments, several of the major agricultural States, such as Iowa and Illinois, decreased in nonfactor payments.

Cash flow status is an indicator which helps provide some perspective on the short-term financial situation of farmers. Although the wealth and income situation of the average farm operator may be adequate in terms of the farmer's resources, the cash flow may be inadequate to meet current obligations, thus causing financial difficulties. This may not be unusual for beginning farmers and for those who may recently have purchased land financed at interest rates which could cause severe financial stress in periods of unfavorable price relationships.

State cash income differs from the production transactions table in that only cash transactions enter the calculations. Net inventory change, perquisite rent for hired labor, and home consumption are not cash items and are not included in receipts. Cash uses include only those expenses that are cash transactions. Capital consumption is a noncash expense and is not included. The perquisites for hired labor are also excluded. Cash income from farming measures the cash available for capital asset purchases, loan retirement, and operator household cash income. Cash income from farming is generally higher than returns to operators.

#### Cash Flow

Cash income from farming for the United States dropped from \$32.6 billion in 1981 to \$27.9 billion in 1982. Cash income from farming was highest in California at \$3.7 billion in 1982, down from \$4.2 billion of 1981. Wisconsin, at \$1.6 billion, Florida at \$1.6 billion, Iowa at \$1.5 billion, and Minnesota at \$1.4 billion earned the next highest cash income from farming in 1982. In 1981 the rankings were California, Iowa, Wisconsin, Florida, and Minnesota.

#### Net Farm Income

State net farm income statistics are reported in tables 5 through 14. Net farm income accounts differ from production transactions accounts in that farm household income is included in net farm income and CCC loans are considered sales when the loans are made.

The farm household accounts affect both the income and expenses in net farm income. The imputed rental value of farm operator dwellings is included as income. The expenses for these dwellings are included in repair and operation, interest, taxes, capital consumption, and other miscellaneous expenses.

Cash receipts of the farm production transactions accounts and the net farm income accounts differ by the amount of change in CCC loans adjusted from the loan value to the current market value. Loans liquidated are added into the transactions accounts as receipts in the year the loans are liquidated. These loans have already been counted as receipts in the year the loans were made under the net farm income accounts.

The five leading States in net farm income after inventory adjustment were California, at \$3 billion; Florida, at \$1.4 billion; Iowa, at \$1.2 billion; Wisconsin, at \$1.1 billion; and Minnesota, at \$1.1 billion. Although Texas was third in gross receipts, at \$11.4 billion, net farm income was only \$829 million as production expenses were second highest at \$10.2 billion and inventory change dropped \$342 million. Minnesota's gross receipts were almost \$4 billion below Texas, but Minnesota's net income was higher.

Three States recorded negative net farm income after inventory adjustment: Wyoming at -\$56 million, West Virginia at -\$40 million, and Maine at -\$18 million.

#### Commodity Credit Corporation Loans

As noted, CCC loans under the production transactions accounts and the net farm income accounts are treated differently. Under the transactions accounts, CCC loans are treated as loans. If these loans are liquidated (commodities are physically delivered to CCC and the loan canceled) or repaid with the commodity being sold on the open market by the producer, then these loans are considered sales at that

time. The net effect is the same for both accounts, but the year in which they are counted as sales may differ. Because the CCC loans are counted as loans in the transactions accounts, the quantities under loan are recorded as inventories. In the net farm income accounts, CCC loans are counted as sales at the time the loan is made and the quantities under loan are not counted in inventory calculations.

#### Production Expenses

Production expenses of transactions accounts and net farm income accounts differ in several ways. The expenses of operators' dwellings are included under the net farm income accounts but are excluded under the transactions accounts. Repair and operation, interest, business taxes, capital consumption, and some miscellaneous accounts are higher in the net farm income accounts because they include household expenses. Feed, livestock, seed, fertilizer, electricity, marketing charges, and nonreal estate interest are the same for both accounts. Contract labor is included as a part of wages under the net farm income accounts but is a part of the service accounts—machine hire, custom work, and contract labor—in the transactions accounts. In the net farm income accounts, only net rent to nonoperator landlords is an expense.

Total U.S. production expenses increased from \$137 billion in 1981 to \$140.1 billion in 1982. The leading States in production expenses in 1982 were California, at \$12 billion; Texas, at \$10.2 billion; Iowa, at \$10.1 billion; Illinois, at \$7.6 billion; and Nebraska, at \$6.7 billion. The first five States for 1981 were California, Iowa, Texas, Illinois, and Nebraska.

Production expenses as a percentage of gross farm income varied greatly by State. For the major agricultural States, the percentage varied from 91 percent for Illinois to 78 percent for California. Texas was 90 percent, Iowa 88 percent, and Nebraska 87 percent. The U.S. average was 85 percent. For three of the States, Maine, West Virginia, and Wyoming, production expenses actually exceeded gross income, and their net income was negative. Production expenses in Florida were only 70 percent of gross income, and Washington's share was only 75 percent.

#### STATE BALANCE SHEET ACCOUNTS

The balance sheet accounts are separated into those "excluding farm households" (table 19) and those "including farm households" (table 20). The accounts "including farm households" are the same accounts as were designated "Balance sheet of the farming sector, by State" in the 1979 statistics published in 1980. Those "excluding farm households" are the same as the tables listed as "new methodology" in the 1979 statistics.

In the balance sheet accounts, when household assets are excluded, so are the operators' dwellings, household portion of

automobiles and trucks, household equipment, time deposits, and U.S. savings bonds. Operators' dwellings make up about 66 percent of the value of the household assets excluded.

Real estate assets make up over 75 percent of total farm assets, and thus the movement of real estate values strongly affects total farm assets.

In the accounts where farm household assets are excluded, the household portion of the debt is also excluded. The portion of the debt attributed to the operators' dwellings, household portion of automobiles and trucks, and household equipment is removed.

The leading State in total farm assets including household assets was Texas with \$101.1 billion. Real estate made up over 80 percent of the total assets at \$82.1 billion. California was second at \$77.4 billion in total assets, Iowa third at \$73.6 billion, Illinois fourth at \$65.5 billion, and Minnesota fifth at \$48 billion. In 1979 Iowa had the most total farm assets at \$69.5 billion, Texas second at \$68.9 billion, Illinois third at \$66.4 billion, California fourth at \$49.8 billion, and Minnesota fifth at \$39.1 billion.

The decline in farmland values, especially in the Corn Belt States, has changed the order for total farm assets. The average value per acre of land and buildings in Texas increased from \$492 per acre on February 1, 1981, to \$593 per acre on April 1, 1983. In California the value per acre increased from \$1,735 to \$1,925. In contrast the value per acre in Iowa decreased from \$1,941 to \$1,568 during the same period, and Illinois dropped from \$2,133 per acre to \$1,727. Minnesota farmland values also decreased from \$1,231 to \$1,065 per acre. The economic recession in the general economy, the strong U.S. dollar, and poor world economic conditions, reduced demand for farm commodities and the demand for farmland. High interest rates have also made borrowing for farmland purchases more difficult. Some States have diverse agriculture and nonagricultural influences which hold farmland values up; but these States had only slight increases in farmland values, especially in California, Texas, and the northeastern States. Those States where agriculture is the dominant influence on farmland values lost in value per acre, especially in the Corn Belt. From April 1982 to April 1983, farm real estate value dropped 13 percent in Iowa, Indiana, and Missouri, 12 percent in Ohio, and 11 percent in Illinois and Minnesota.

#### Debt and Equity

Iowa was the leading State in total liabilities on January 1, 1983, at \$17.5 billion, and showed \$8.8 billion as real estate debt and \$8.7 billion as nonreal estate debt. California was

second at \$16.8 billion, \$8.6 billion in real estate debt and \$8.2 billion in nonreal estate debt. Texas ranked third carrying a total debt of \$13.7 billion, divided at \$6 billion on real estate and \$7.7 billion nonreal estate. Minnesota's total debt of \$12 billion was \$5.6 billion in real estate debt and \$6.4 billion in nonreal estate debt. Illinois, in fifth place, had \$6.3 billion in real estate debt and \$5.5 billion in nonreal estate. Nevada had 72 percent of its farm debt secured by real estate in contrast to Nebraska, which only had 38 percent of its farm debt secured by real estate.

#### Debt-to-Asset Ratio

The debt-to-asset ratio, while relatively low in agriculture, has been climbing the past few years. The debt-to-asset ratio for the United States has increased from 16.1 percent on January 1, 1979, to 20.6 percent on January 1, 1983. ratio in the Corn Belt States has increased rapidly. In Illinois the ratio increased from 11.4 percent in 1979 to 18 percent in 1983; Iowa increased from 16.4 percent to 23.8 percent; and Indiana jumped from 15.4 percent to 22.1 percent. Some States actually declined. Texas decreased from 13.6 percent to 13.5 percent; Utah declined from 13.2 percent to 12.8 percent; and West Virginia dipped from 8.8 percent to 8.4 percent. Other States rose only slightly, such as California from 20.7 percent to 21.7 percent. The decline in farmland values has affected some States more than others. Although Iowa had the most debt, its debt-to-asset ratio was lower, at 23.8 percent, than many of the other States. South Dakota had the highest debt-to-asset ratio at 28.3 percent, followed by Nebraska at 28 percent, Georgia at 27.8 percent, and Minnesota and New York at 25 percent each. If the value of the household assets are taken out, the leading States are Georgia at 28.9 percent, South Dakota at 28.6 percent, Nebraska at 28.5 percent, Maine at 26.9 percent, and New York at 26.5 percent.

Many of the States had fairly low debt-to-asset ratios. West Virginia had the lowest ratio at 8.4 percent, although net farm income was very low in West Virginia. Total debt amounted to only \$392 million in West Virginia. Hawaii was also low in debt with a total of only \$273 million and a debt-to-asset ratio of 10.5 percent. Illinois had only an 18-percent debt-to-asset ratio, although that ratio had increased rapidly. Land values had fallen the last 2 years, pushing the ratio up as lower income failed to retire the debt as rapidly as the values fell.

\*Less than 0.05 percent. Percentages may not be accurate to 0.1 in last digit because of method of machine computation.

NA = not available.

- $\underline{1}/$  Except for mohair, the livestock commodities include only State estimates of income for which the Department estimatea value of marketing for 1980--82. All other estimates, while included in commodity group totals, are not listed separately but are combined as appropriate in "other livestock" to prevent disclosure of confidential data.
- 2/ Commodities do not add to group total because broilers, turkeys, and minor commodities—turkey eggs, ducks, geese, guineas, and other poultry as estimated—are included in "other livestock" below in order to avoid disclosure of confidential data. All minor commodities may not be estimated in all States.
- 3/ Cash receipts include value of home consumption.
- 4/ Commodities do not add to group totals because broilers, turkeys, and mohair for certain States and other minor commodities such as bees, horses and mules, goats, goatmilk, mink and other pelts, rabbits, catfish, reindeer, and other livestock snd products when reported are included for all States in "other livestock" in order to avoid disclosure of confidential data.
- 5/ See footnotes 2 and 4
- 6/ Except for rye, barley, corn, oats, sorghum grain, flaxseed, peanuts, soybeans, dry edible beans, dry field peas, potatoes, sweetpotatoes, citrus fruit, apples, apricots, svocados, cherries, dates, grapes, peachea, pears, plums and prunes, pecans, sugarcane syrup, alfalfa seed, fescue seed, crimson cloverseed, lespedeza, orchardgrsss, red cloverseed, sweet cloverseed, timothy, vetch, popcorn, strawberries, forest products, and greenhouse and nursery products, the commodities include only State estimatea of income for which USDA estimates the value of production for 1982. Allowances are made in "other" categories for other States as all other estimates, while included in commodity group totals, are combined as appropriate in "Miacellaneous vegetables," "Other berries," Other fruits and nuts," or "Other field crops" items.
- $\underline{7/}$  Includes vegetables produced in the State but for which USDA does not estimate individual values of production.
- $\underline{8}/$  Includes other melons except honeydews and watermelons.
- 9/ Gooseberries and other berries.
- $\underline{10}/$  Includes fruita and nuts produced in the Stste but for which USDA does not estimate individual values of production.
- $\underline{11}/$  Sugar and seed crops, mint, hops, popcorn, other field crops, forest products,  $\overline{\text{mushrooms}},$  and greenhouse and nursery products.
- $\underline{12}/$  Includes seeds produced in the State but for which USDA does not eatimate  $\overline{1n}dividual$  values of production.
- $\underline{13}/$  Includes seed and other field crops produced in the State but for which USDA  $\overline{\rm doe}\,\rm s$  not estimate individual values of production.
- 14/ Fresh only.
- 15/ Processing only.

Tables 11, 12 13, and 14--Footnotes

- 1/ Details may not add to totals because of rounding.
- 2/ Includes bulbs, plants, and trees.
- 3/ Repairs and maintenance of buildings, repairs and operation of motor vehicles and other machinery, and petroleum fuel and oil used in the farm business.
- 4/ Includes cash wages, perquisites, and (1951 to date) social security taxes paid by employers.
- 5/ Includes binding, cotton ginning, Federal crop insurance, containers, dairy supplies, electricity, greenhouse and nursery products, grazing fees, harness and saddlery, net insurance premiums (fire, wind, and crop hail), irrigation, livestock marketing service (excluding feed and transportation), milk hauling, miscellaneous hardware (including blacksmithing), machine hire and custom work, miscellaneous livestock and poultry supplies, pesticides, small handtools, short-term interest, telephones (business share), veterinary services and medicines (plus insemination), and other miscellaneous.
- 6/ Less than \$50,000.
- 7/ Includes depreciation and accidental damage to farm buildings and depreciation of motor vehicles and other farm machinery and equipment.
- 8/ Minus sign in States reflects a net income position rather than a net expense position.
